

PT. KAHAYA AGRO PLANTATION

CONSERVATION AND BIODIVERSITY AREA PATROLS

On July 23, 2018, PT. Kahayan Agro Plantation has conducted a periodical patrol in the forestry to monitor conservation and biodiversity areas, such as:

- Forest
- Flora and Fauna
- Riparian Zone
- Sacred Area

The activities performed in the Patrol were as follows:

- To ensure that within the forest area, no illegal logging, forest burning or other activities which are potential to damage the forest .
- To ensure that there are no hunt activities within the forest area.
- To inventoried the biodiversity of flora and fauna by photos documentation at the time of patrols
- To inventoried all conservatory advice boards whether they are still readable or not.
- The improvement of early warning system boards.
- To perform socialization toward the surrounding community so they will not conduct illegal logging and animal hunt within the area marked by the company as the conservation area.

The sustainability team, company employees and the GIS team carry out forest conservation practices by using cameras, GPS and collecting photo photos as reports on the results of monitoring conservation and biodiversity areas.

Signboard appeals to employees and community members to help protect and preserve rare animals in the company's area.

Signboard appeals to employees to protect the river, to not carry out activities in the riparian zone which can cause contamination, such as: chemical activity and waste disposal.
